

Early Warning Signs and Symptoms

Having a combination of symptoms (not just one symptom) indicates that someone might be showing signs of a mental health condition. Be aware of these symptoms when they last longer than a few weeks:

Problems with concentration, memory, or ability to think clearly

Changes in eating such as loss of appetite or overeating

Not being able to complete school or work tasks

Feeling overly worried

Feeling sad, empty, hopeless, or worthless

Sensitivity to sounds, sight, smell, or touch

Irritability and restlessness

Loss of interest in activities that are normally enjoyable, withdrawal from others, or disconnection

Feeling like your brain is playing tricks on you. Hearing knocking or scratching sounds, or name being called

Changes in energy level and sleep patterns. Often someone will sleep during the day and be up at night

Signs and symptoms that require immediate attention:

- Thoughts or plans of killing or hurting one's self or another person
- Hearing voices or seeing things that no one else can hear or see
- Unexplainable changes in thinking, speech, or writing
- Being overly suspicious or fearful
- Serious drop in school or work performance
- Sudden personality changes that are bizarre or out of character

If you or someone you know is in crisis, call 1-800-273-TALK (8255), go to your local Emergency Room or call 911.
